

Product number **T061**  
Revision number **RN3.0**

<b>Product Name</b>	Mouse blood coagulation Factor XIII-A <sub>2</sub> (mFXIII, A subunit)
<b>Synonym</b>	Recombinant Fibrin stabilizing factor, protein-glutamine-γ-glutamyltransferase
<b>Source</b>	Recombinantly produced in insect cells
<b>Quantity</b>	200 µg
<b>Purity</b>	> 95% [by SDS-PAGE]
<b>Molecular Weight</b>	83 kDa (monomer); 166 kDa (homodimer)
<b>Description</b>	Recombinant mouse Factor XIII is a homodimer (A <sub>2</sub> ) composed of two chains held together by non covalent bonds. After activation of the zymogen by Thrombin and Ca <sup>2+</sup> to its active form (α* <sub>2</sub> , Factor XIIIa), Factor XIIIa catalyzes the formation of covalent bridges (ε-(γ-glutamyl) lysine bonds) between fibrin units to increase the elasticity of the clot network. The resulting cross-linked fibrin is insoluble and resistant to lysis.
<b>Application</b>	mFXIII catalyzes acyl transfer reactions from glutamin residues in proteins or peptides to primary amines, e. g. the formation of ε-(γ-glutamyl) lysine bonds between proteins by transferring the acyl group of a peptide-bound glutamine residue to the primary amino group of a peptide-bound lysine residue.
<b>Appearance</b>	White lyophilized solid.
<b>Storage</b>	Storage for several months is possible at ≤ - 20°C.  <b><i>Delivery is possible at ambient temperature</i></b>
<b>Reagents</b>	The recombinant mouse Factor XIII is lyophilized from 20 mM Tris-HCl pH 7.5, 500 mM NaCl, 1 mM EDTA, 1 mM DTT. Sample contains maltodextrin.
<b>Reconstitution</b>	Add the volume of H <sub>2</sub> O the protein is lyophilized from (see Certificate of Analysis) to the vial of lyophilized powder. Rotate vial gently until solid dissolves. After reconstitution the solution should be stored frozen in working aliquots. Keep cooled on ice for short term storage.
