

Zedi's Transglutaminase
Crossword puzzle

Hello Transglutaminase researchers and users!

Finally the submission deadline for the Transglutaminase crossword puzzle is over! Today, March 4th 2014 (Mardi Gras / Shrove Tuesday) my lovely assistant Julina – specially dressed in her ladybird costume – did draw the lucky winner of **1 Apple iPad™**! Congratulations to **Greg Byrne**!

The correct solution to our crossword puzzle is:

HEINRICH WAELSCH

Heinrich Waelsch introduced the term transglutaminase (TG) to the scientific literature about 50 years ago (please see "Transglutaminase: remembering Heinrich Waelsch" by Lazlo Lorand in Neurochem. Int., 2002).

In the following you find remarkable comments of some puzzle participants.

Thank you for the funny minutes.

*That crossword was pretty challenging but I got there in the end.
Thanks for the entertainment.*

I solved your crossword puzzle during a boring meeting ;-)

And the winner is...

Greg Byrne

Greg Byrne, Ph.D. is working since 2003 in the field of celiac disease and transglutaminase. Currently he holds a position as Lecturer in Clinical Immunology at Dublin Institute of Technology.

In his recent work Greg focused on enzyme-substrate relationship between tissue transglutaminase and protein kinase C delta in celiac disease and on the presence and phenotype of tTG-reactive T cells in patients with coeliac disease.
